Revit topography

- Import polysurface as CAD import
- Make sure the measurements matchup (millimeters possibility)
- Then Toposurface the mass under the site tab

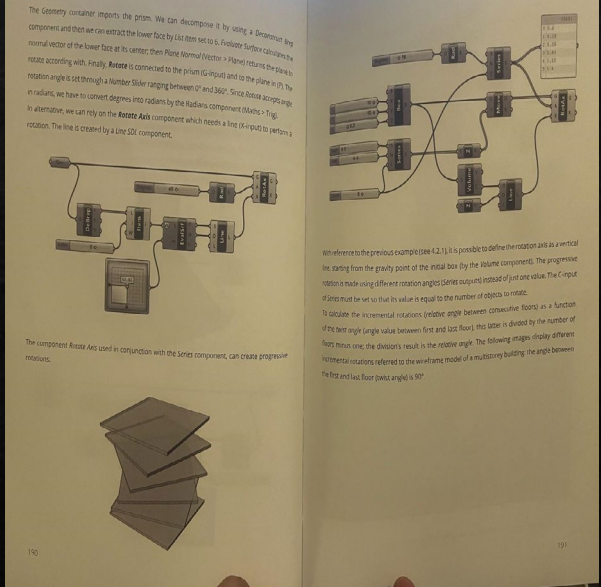

- Go to site then split surface
- This is for multiple materials on your landscape

Problems in code

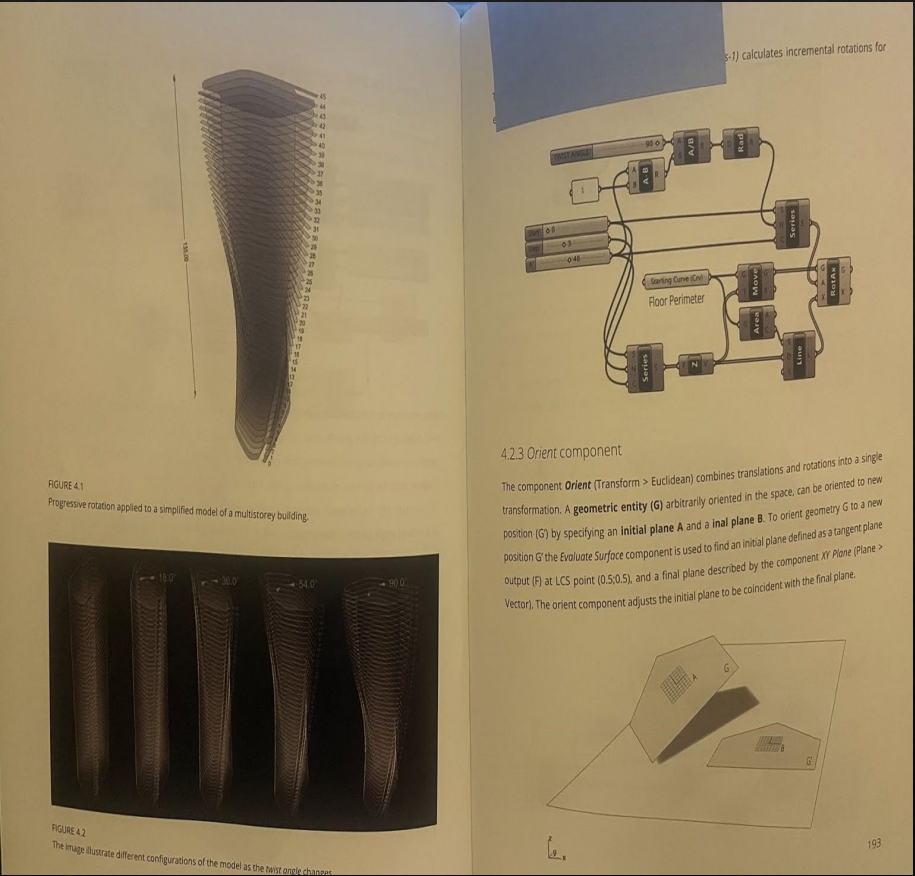

- Downloaded as E77 file
- Did Not work with code

https://www.youtube.com/watch?v=A_8lfcp1z-M&t=1361s

- Would love this to note for future models

Messing with lofted patterns(class code)

Reference code back to save file

Potential to be a organic
structure for
Auditorium seating

Tower with structure

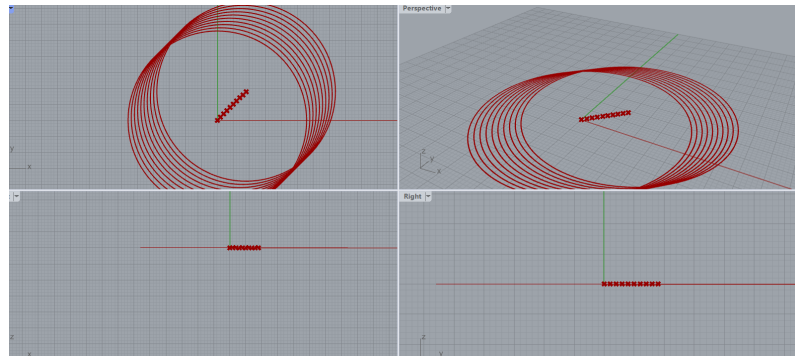

Reference code back to save file

Can make it so the structure sticks
out
of the operating building and
creates a
Cool effect

The Mass

Messing with code
